

Alaska Oil Spill Permits Tool

Alaska's current statewide oil spill response system involves a complex assortment of permits, forms, and applications that must be prepared and filed during various phases of the response. The **Alaska Oil Spill Permits Tool** was developed to facilitate the process of identifying, filling out, and filing with the right agency the forms and permits required to carry out an effective spill response.

Cook Inlet RCAC helped developed this tool through a cooperative work group process, including representatives of those state and federal agencies whose permit forms are included in the tool, as well as representatives from the oil industry and oil spill response organizations.

The tool includes approximately 50 permits, forms, and applications. This set of forms represents the documents most commonly required during oil spill response operations in Alaska required by the following agencies:

FEDERAL

- Environmental Protection Agency
- National Marine Fisheries Service
- US Army Corps of Engineers
- US Coast Guard
- US Department of Transportation
- US Forest Service
- US Fish and Wildlife Service
- National Parks Service
- Minerals Management Service
- Bureau of Indian Affairs
- Bureau of Land Management

STATE of ALASKA

- Department of Environmental Conservation
- Department of Fish and Game
- Department of Natural Resources
- Department of Transportation and Public Facilities

In addition to the permits required by federal and state agencies, the tool provides pertinent applications, forms, and information from several other agencies and organizations (described in the orange section at right).
